

The MBA Proves You Can Do General. Now Do Focused.

Falling stock markets and the rising costs of doing business are making companies worldwide streamline their supply chains. These harsh economic realities make professionals with supply chain knowledge extremely valuable to a wide range of businesses. The nine-month **MIT Master's Degree in Engineering and Logistics (MLOG) Program**, coupled with your MBA, will give you an edge over the competition.

The MIT MLOG curriculum combines innovative supply chain theory and practice taught by industry experts and leading researchers. We invite you to apply for the **MIT CTL Supply Chain Strategy Fellowship** — this is a **FULL SCHOLARSHIP** to the MIT MLOG Program.

You don't have to be an engineer to excel in this program. All you need is the drive to succeed and nine months. You will earn an MIT degree that will catapult your career to a higher level: last year, our students' median annual salary increased by 55% over what they had received before earning their degree.
