

Make the World Better with Leaner Global Supply Chains. Make Your Career Better with More a Valuable Skill Set.

Companies face a daunting challenge in the coming years and decades. Uncertainty in demand, supply, and price is only increasing, and extended global business activities make operations incredibly complex. Understanding how to design and manage a global supply chain is becoming a critical skill in virtually every company and industry.

Procter & Gamble, the world's largest consumer goods company, recognizes the need for these skills and is searching the world for future supply chain leaders. In order to attract young professionals to this crucial field, P&G has established the **Procter & Gamble Global Supply Chain Fellowship program**. Fellowship recipients are admitted to the **MIT Master of Engineering in Logistics (MLOG)** Program, receive a **half-tuition scholarship**, and work directly with P&G executives on their master's thesis project, giving them useful real-world experience.

The **MIT MLOG** Program is a nine-month master's degree focused solely on supply chain management. Combining cutting edge research with state of the art practice, the **MIT MLOG** program gives its students the skill set required to be successful in this growing field.

To be considered for the 2009 Procter & Gamble Global Supply Chain Fellowship or simply to get more information, please contact mlog@mit.edu or go to: www.mit.edu/mlog/fellowships.htm.
